

Boulder Emotional Wellness

Date and Time: 1/27/2025 9:34 PM

Clinician: Holly Trienens, Intern

Supervisor: Erica Johnson

Patient: Isabelle Page, DOB 10/2/1997

Diagnosis

F41.1 Generalized Anxiety Disorder

Diagnostic Justification

Isabelle's symptoms of anxiety include rumination, panic, overthinking, difficulty doing new things, fixation, constant daily anxiety, finding safety in routine, and decreased confidence when overwhelmed. She also demonstrates rigid thinking and related behaviors.

Gad 7: score of 16, severe anxiety. Taken 1/28/25.

Presenting Problem

Anxiety, rigid behavior, rumination, difficulty making decisions.

Treatment Goal

Isabelle will experience a decrease in anxiety symptoms with an increase in feeling grounded and confident.

Objective 1

Using mindfulness exercises and parts work, Isabelle will explore her anxiety related parts and work on integrating and healing their related traumas. Progress will be self-reported and indicated as a score of less than 15 on the GAD-7.

Estimated Completion: 6 months (7/27/2025)

Treatment Strategy / Intervention

- Supportive Reflection; Modality: Individual Therapy; Frequency: Once per week; Estimated Completion: 6 months (7/27/2025).
- Relaxation/Deep Breathing; Modality: Individual Therapy; Frequency: Once per week; Estimated Completion: 6 months (7/27/2025).
- Role-Play/Behavioral Rehearsal; Modality: Individual Therapy; Frequency: Once per week; Estimated Completion: 6 months (7/27/2025).
- Psycho-Education; Modality: Individual Therapy; Frequency: Once per week; Estimated Completion: 6 months (7/27/2025).
- Mindfulness Training; Modality: Individual Therapy; Frequency: Once per week; Estimated Completion: 6 months (7/27/2025).
- Guided Imagery; Modality: Individual Therapy; Frequency: Once per week; Estimated Completion: 6 months (7/27/2025).
- Exploration of Relationship Patterns; Modality: Individual Therapy; Frequency: Once per week; Estimated Completion: 6 months (7/27/2025).
- Exploration of Emotions; Modality: Individual Therapy; Frequency: Once per week; Estimated Completion: 6 months (7/27/2025).
- Exploration of Coping Patterns; Modality: Individual Therapy; Frequency: Once per week; Estimated Completion: 6 months (7/27/2025).
- Parts Work; Modality: Individual Therapy; Frequency: Once per week; Estimated Completion: 6 months (7/27/2025).
- Cognitive Reframing.
- Cognitive Challenging.

Discharge Criteria/Planning

Treatment Plan

Boulder Emotional Wellness

Date and Time: 1/27/2025 9:34 PM

Clinician: Holly Trienens, Intern

Supervisor: Erica Johnson

Patient: Isabelle Page, DOB 10/2/1997

Isabelle will report a different relationship with her anxiety. She will feel confident in managing it and relating to it when it arises. She will be able to implement strategies to decrease her symptoms when necessary.

Additional Information

Therapist and Isabelle discussed social location and other potential barriers to treatment. None were identified at this time.

Prescribed Frequency of Treatment

Weekly

I declare that these services are medically necessary and appropriate to the recipient's diagnosis and needs.

Holly Trienens, Intern, Associate, signed this note and declared this information to be accurate and complete on 1/30/2025 at 8:58 AM.

Erica Johnson, Licensed Professional Counselor, License 14267, signed this note and declared this information to be accurate and complete on 1/30/2025 at 5:03 PM.

Signature

I acknowledge that I have participated in the development of the treatment plan and agree with the goals, objectives, and interventions.

Speech: Normal

Mood: Euthymic

Affect: Congruent

Insight: Excellent

Judgment/Impulse Control: Excellent

Memory: Intact

Attention/Concentration: Good

Thought Process: Unremarkable

Thought Content: Appropriate

Perception: Unremarkable

Functional Status: Intact

Risk Assessment

Patient denies all areas of risk. No contrary clinical indications present.

Medications

Fluvoxamine 100 mg

Subjective Report and Symptom Description

Isabelle shared a positive response from her mom which surprised her. The theme today revolved around Isabelle putting a lot of energy into making decisions and how she is speaking to herself.

Objective Content

Isabelle was at home for session.

Therapist reflected the amount of energy Isabelle was putting into a decision that was not pivotal. Isabelle agreed. Therapist modeled how to recognize this pattern, say hello to the part, and make a decision. Isabelle took notes. Isabelle named her tendency to belief there is a right decision and that she needs to make it. Therapist modeled slowing down, naming the part, breathing, and then asking if this decision is vital. Isabelle softened into this concept.

Therapist asked about how Isabelle is treating herself. Isabelle shared her realization that she was speaking to herself the same way her mom did when disappointed. Therapist reflected the potential underlying message in her mom's disappointment. Isabelle agreed. Isabelle brought up the upcoming brunch that was distressing her. Therapist and Isabelle processed the involved emotions and beliefs. Therapist

modeled naming, "This is hard for me." Isabelle named her aggression part and her self-aggression part. Therapist guided Isabelle in allowing the emotions to be felt that came up when surrendering to "This is hard for me." Isabelle deepened into the underlying emotions. Therapist guided Isabelle through a containment exercise for brunch with a boundary of revisiting this next week. Isabelle participated and named her surprise at how she could do it.

Risk Assessment

Patient denies all areas of risk. No contrary clinical indications present.

Medications

Fluvoxamine 100 mg

Subjective Report and Symptom Description

Isabelle expressed frustration with herself for her difficulty in improving her nutrition to match her training goals. She is four days away from her 1/2 iron man competition and is only now increasing her calories. She was struggling with accepting and facing her struggle with nutrition and eating.

Objective Content

Isabelle was at home for session.

Therapist supported Isabelle's frustration and negative self-talk. Isabelle shared about her frustration and disappointment. Therapist reframed Isabelle's process and modeled the idea of acceptance. Isabelle reflected on her relationship to her struggle with nutrition. Therapist and Isabelle explored the idea of routines and how they change. Isabelle expressed her difficulty with this. Therapist guided Isabelle to be with the emotions and sensations. Isabelle reflected on her tendency to avoid these feelings. Therapist reframed the struggle as part of Isabelle's story rather than her identity. Isabelle took notes. She touched on her shame present as well. Therapist

inquired about how Isabelle was talking to herself. Isabelle admitted to talking to herself horribly. Therapist modeled an alternative way to talk to herself. Isabelle took notes.

Therapist used Isabelle's hope to fuel herself more as a resourcing exercise. Isabelle reflected on the support she received from her mom and sister. As she sat with the resource, Isabelle expressed her embarrassment. Therapist reflected ARN present and modeled how to be with the rejection. This was challenging.

Risk Assessment

Patient denies all areas of risk. No contrary clinical indications present.

Medications

Fluvoxamine 100 mg

Subjective Report and Symptom Description

Isabelle shared about her race and time with family over the weekend. She had a negative lens about herself qualifying for the world championship. She was feeling tension about an upcoming family trip as well.

Objective Content

Isabelle was home for session.

Therapist inquired about Isabelle's race. Isabelle shared, "It was a blip in the system that I qualified for the world championship. Therapist reflected the opportunity to figure out nutrition more holistically. Isabelle agreed and reflected on her recent experience.

Isabelle brought up an upcoming trip to England and the strained family dynamics. Therapist and Isabelle explored this further. Therapist modeled how Isabelle could communicate with both her dad and sisters differently if this scenario comes up in the future. Isabelle seemed relieved to have an option so as not to repeat the guilt and lying that resulted this time.

Therapist and Isabelle touched briefly on her concerns for this upcoming family trip. Isabelle shared her initial thoughts about meals and shared the bigger concern about her mom. Therapist collected information about cues that Isabelle finds triggering about her mom.

Isabelle shared.

Briefly, therapist touched back on how Isabelle felt she did in the race. Isabelle sighed and shared her feelings of her parents not being proud of her. She then shared how her parents did share how they were proud. Therapist reflected the difficulty in taking in their affirmations and it being a deeper issue. Isabelle agreed.

Risk Assessment

Patient denies all areas of risk. No contrary clinical indications present.

Medications

Fluvoxamine 100 mg

Subjective Report and Symptom Description

Isabelle was ready to work with her discomfort surrounding her relationship with her mom. She was able to be in touch with the part that feels disgusted and was more open than usual in connecting with it. She was currently visiting her parents so her parts were very present.

Objective Content

Isabelle was away from home for session.

Therapist held space for Isabelle to share her experience at her parent's home so far. Isabelle shared about her experience and struggles.

Therapist guided Isabelle in physiological sighs. Isabelle participated and reported feeling a bit better.

Therapist guided Isabelle in working with her disgusted part. Isabelle worked on connecting with this part, containing opposing parts, and getting to understand and validate this disgust part. Isabelle was able to attune to her younger part. Therapist invited a positive belief to apply to Isabelle. Isabelle affirmed her ability to parent herself and to do something right.
